

## **Manufacturing Engineer**

*Holland Landing, ON*

### **About Us**

Inscope is a design enabler. We have been saying Yes since 1888 with a versatile portfolio of systems, storage and wall products that are adaptable and built to last. With care and consideration, and more than a century of expertise, our philosophy is to always do what we can to say Yes.

### **About the Role**

The primary purpose of the Manufacturing Engineer is to develop and maintain methods to ensure the manufacturing of a quality product at a minimum cost. This role must support production by working closely with the plant to ensure the proper coordination of projects and resolution of Engineering launch issues as they relate to new or revised products. This position responsibility applies to all products produced at the Holland Landing facility and those that have “cross-over” production at other Inscope facilities.

- Reports to Manufacturing Engineer Team Leader.
- Accountable for the manufacturing engineering functions in the plant.
- 50% Factory.
- 50% Office.
- Ready to work in a fast paced, evolving work environment.

### **Primary Tasks & Responsibilities**

- Investigate and analyze new and/or existing products and processes for the ability to meet production and performance requirements.
- Develop project plans for assigned initiatives which include, scope, return on investment, timelines, status reporting & management updates, change notices, launch planning and training.
- Develop and maintain methods and standards to ensure the manufacturing of quality products at minimum cost.
- Ensure responsibility for all products produced at the Holland Landing facility and those that have cross over production at other Inscope facilities.
- Liaison between other departments including, but not limited to, Design Engineering, Maintenance, Purchasing, QA and Production.
- Project management as related to general manufacturing engineering projects.
- Assist in the development and control of budgets for projects

## **Knowledge, Skills, Abilities & Education**

- College diploma or university degree in engineering or equivalent field experience.
- General manufacturing knowledge and process development.
- Filing/Systems product knowledge and ability as they relate to metal, paint and assembly processes.
- Excellent interpersonal, written and verbal communication skills.
- Ability to work well with multiple people across multiple departments.
- Project management experience.

If you have the qualifications for the above position and are interested in joining a team oriented progressive company with excellent benefits, please submit your resume for consideration to [careers@inscapesolutions.com](mailto:careers@inscapesolutions.com).

We thank all applicants for their interest, but advise that only those selected for an interview will be contacted.
